1 **CLIENT TERMINAL FOR DISPLAYING PROGRAM GUIDE INFORMATION**

2 **ASSOCIATED WITH DIFFERENT PROGRAMS WITHIN A POP-UP**

3 **ABSTRACT OF THE DISCLOSURE**

4 A client terminal providing an on-screen program guide that allows a user to easily

5 navigate through program guide information within a pop-up for different programs on a selected

6 channel. A head end provides program guide information (PGI) to the client terminal. The PGI

7 includes first program data (FPD) associated with a first program and second program data

8 (SPD) associated with a second program. The client terminal includes a terminal controller

9 responsive to an on-screen display control program that causes: the display of channel identifiers,

10 the selection of one of the channel identifiers in response to a first input, and the display of a

11 pop-up for the selected channel identifier. The pop-up displays the FPD associated with the first

12 program in response to the first input. In response to a second input, the pop-up displays the

13 SPD associated with the second program.
